

acoustic guitar combo

AG30

and the sound is wonderful

Everyone knows how pleasant an acoustic guitar can sound. But alas, that sound is often not loud enough to please an audience of more than a few people. So, popular or not, electronic means should help to overcome this problem. But this does not mean, that a normal combo can help you out with this problem. The acoustic sound is so specific, that only a special combo, equipped with an amplifier, modified for this purpose, can help you out ! Novanex did a lot of research in this field and tried to realise more than that at a time: The amp should be compact as well and ... be available at a reasonable price ! The AG30 was the result of this intention. The well known 'METAL' outfit was chosen as a 'hull' for the special amp that did just one thing well: make an acoustic guitar with piezo-pick-up's sound as an acoustic guitar. And about that sound no comment .. you can only listen to it to believe, that the AG30 is worth to be owned by an acoustic guitar-player.
